

Category #7:

Cleaning products contained in Single use Aerosol Cans or those with ozone depleting propellants should not be used.

State Response:

Ozone depleting compounds are prohibited. Furthermore, OGS guidelines specify that cleaning products should be undiluted and not be hazardous to humans, not combustible and not contain substances that contribute significantly to the production of photochemical smog, tropospheric ozone or poor indoor air quality. OGS would support a review and revision of the Guidelines to determine if further improvements can be made while still allowing for reasonable variety and innovation in the market.

Frequently Asked Public Comment:**Single Use Aerosol Cans/Cans Using Ozone Depleting Propellants**

--Must not be delivered in single use aerosol cans or cans using ozone depleting propellants (Apply to Tier I Products).
